

Team MedeFile Universal Personal Health Records

Kevin Hauser - CEO

Company Information

➤ Company Overview

MedeFile is a comprehensive Personal Health Record service that collects, digitizes, organizes and stores all of its members ACTUAL medical records.

Users can access their complete medical history 24 hours a day, 7 days a week, from virtually anywhere in the world.

This information can be accessed via the web, mobile device and/or a proprietary USB drive we call the MedeDrive.

MedeFile collects records from ALL providers electronically or in paper format. We continue to poll these providers automatically at least every three months, or upon the member's request. MedeFile can update patient records from Allscripts daily, so the members are receiving the most up to date information possible.

Our mission is to disrupt the current healthcare paradigm by placing the patient at the center of the spectrum. We believe that a more informed patient will lead to a more educated, compliant and communicative patient which in turn, results in positive outcomes for both patient and provider.

Solution Overview

➤ Summary of Application/Product

- MedeFile is an electronic Personal Health Record service that can collect, digitize, organize and store ALL of its members ACTUAL medical records.

➤ Summary of Client/Patient benefits from using Product

- Both providers and patients have ready access to information, saving time and money in treatment. Lifestyle tools promote wellness, engagement and adherence to required regimens.

➤ Detailed Description

- MedeFile collects records from ALL providers electronically or in paper format. We continue to poll these providers automatically at least every three months or sooner upon member request. Our system provides for the storage of Advanced Directives (Living Wills, DNR's, Health Care Proxies, etc.). The Medicine Cabinet instantly alerts members if potential drug interactions exist between medications. MedeMinder helps establish medication and upcoming doctor appointment reminders. Also provided is a 24/365 Emergency Call Service designed to reach out to loved ones in the event of an emergency. MedeFile provides **service** as opposed to just technology. Virtually all other PHR's on the market today require the individuals to be responsible for gathering their own medical records and organizing them effectively.

Solution Overview

➤ **The application developed addresses the following category:**

- Applications that improve management of high cost chronic diseases.
- Innovative approaches to addressing value-based care imperatives.
- Both

➤ **Healthcare/Business problem addressed:**

MedeFile collects and maintains actual medical records for each member in a private, encrypted electronic account. This ensures immediate informational access for all members of a patient's care team whenever and wherever needed. By enabling all treating physicians with a comprehensive view of the patient's entire medical situation, diagnostic and treatment plans are expedited and the odds of errors are greatly diminished.

The application developed addresses the improvement of management of high cost chronic diseases as well as innovative approaches to addressing value-based care imperatives.

Integration Description

Brief of application:

This application will be used for patients who visit facilities employing the use of the Allscripts Unity and Enterprise solutions.

It will be used in pulling the following patient's medical details with help of different Unity services:

- **Allergies**
- **Medical Conditions**
- **Surgeries**
- **Immunizations**
- **Medications**
- **Family History**
- **Shared Medical Documents**

This application will generate different CSV files and medical documents using the pulled medical information.

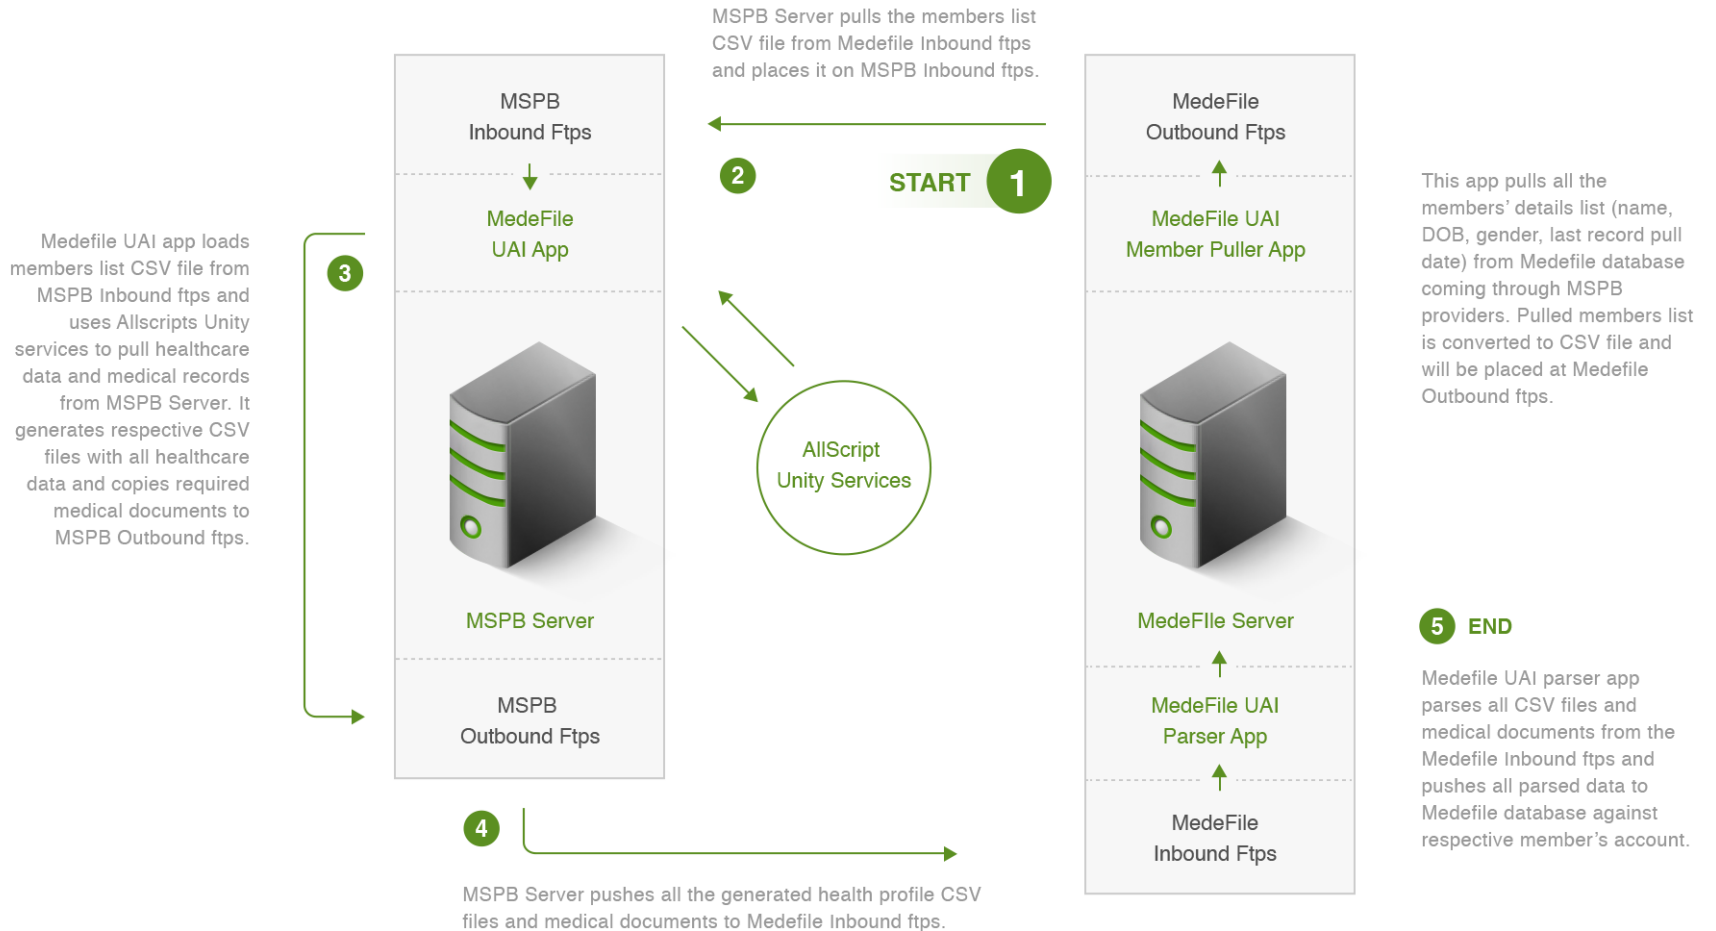

These generated files will be sent to MedeFile's parser to parse the data and place it into the respective member's account.

APIs/Web Services calls used.

Unity web service functions used by this application:

GetChangedPatients **SearchPatientsRXHub5**
SearchPatients **GetPatientSections**
GetPatientChartSections **GetDocuments**

Solution Architecture

Video Demonstration

- <http://vimeo.com/58847761>
- Video link above combines a one minute marketing video shown in the waiting room of provider offices, followed by a brief 3+ minute video demonstration of the various features the MedeFile system incorporates. This demonstration will reveal the ease of the User Interface and User Experience.
