Who We Are

VisitEase, Inc. is a privately held Medical Application Design company whose primary business is to develop Applications to work with existing medical software for the clinic and physician's office, which will add key components to the software that could save Users of our Applications time and money.

Our current Application is E/M Data Assist. Its integration supports acquiring Patient Visit Data directly from Allscripts EHRs through Allscripts Open APIs.

This way, the security of your patient's medical information is already established, and there are no HIPPA issues relating to its use. E/M Data Assist provides an in-depth summary of all steps taken during the Patient Visit to ensure a Medically Appropriate History and Exam were completed to compliment the physician's Medical Decision Making (MDM) calculations used to determine the correct E/M Service Code.

With E/M Data Assist practice personnel will never wonder if they have the backup they need for the E/M Code selected!

How does a practice know if the Medical Decision Making for a particular patient visit is Medically Appropriate?
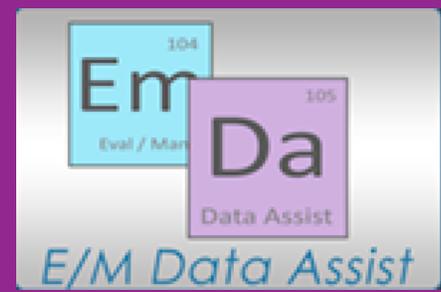

From 1997 until the end of 2020 an E/M code for an office visit for a new or established patient was determined from three categories of information

- History of the patient, including Family History, Social History, Medical History, History of Present Illness (HPI), Review of Systems and Problem List
- Exam performed on patient
- Complexity of the treatment associated with the chief complaint the patient listed as the primary reason they felt an appointment with the physician was necessary

We've got your back!

Core *FEATURES*

The challenges that medical clinics and private practices are facing today due to the Coronavirus and will be facing in the near future with the changes in CPT E/M guidelines effective January 1, 2021 will be significantly tougher than in the past.

To offset these challenges, VisitEase, Inc. has developed our E/M Data Assist application, to support the Medical Decision-Making process used by the physician to determine the correct CPT code for E/M Services. The E/M Data Assist Application Integration is supported through our partnership with Allscripts through the Allscripts Developer Program.

- **Fast and EASY**
- **Get ALL your DATA**
- **Totally SECURE**
- **Pays for ITSELF**

Core *FEATURES*

- **Fast and EASY**
  - Hours of medical data in seconds
  - Single button click for a complete patient visit
  - Batch print for patient visits in any time period

- **Get ALL your DATA**
  - Written summary of all data accessed
  - One concise summary of all patient visit activities
  - All actions by front desk, clinicians, nurses and physicians

- **Totally SECURE**
  - NO outside connection to E/M Data Assist
  - E/M Data Assist is integrated through Allscripts Open API's
  - E/M Data Assist integration supports acquiring Patient Visit Data directly from Allscripts EHRs through Allscripts Open API's

- **Pays for ITSELF**
  - Save time & money with each patient
  - Hours of work per day done in seconds
  - A complete patient visit summary for pennies on the dollar

For pennies a report, E/M Data Assist provides thorough, concise documentation that a:

*Medically Appropriate patient history was taken

*Medically Appropriate patient exam, if necessary, was performed

With E/M Data Assist practice personnel will never wonder if they have the backup they need for the E/M Code selected.
